

Just a
LITTLE BIT OF CHANGE
can make a whole lotta difference.

Believe it or not, when you switch to compact fluorescent light bulbs, you're changing a whole lot more than just a bulb. You're changing the way you use electricity. Or rather, the way you'll use less of it. Switching to compact fluorescent bulbs can reduce your lighting costs by up to 70%. And that's just the start. By ensuring your home is well insulated, properly sealed, and using energy efficient appliances, a lot of little changes can really add up. *To learn more about saving energy, visit TogetherWeSave.com.*
