

Your home might just need weatherizing if ...

If you're hearing sleigh bells from outside, you may need more insulation in your walls. If Santa can't land on your roof because heat from the inside melted the snow, try adding more insulation there, too. And if your ornaments are clinking and it's not because of the cat, you just might need weather stripping or caulk around your windows and doors.

Give yourself a Christmas gift ... weatherization - a future of lower utility bills and comfort. Contact your local electric cooperative for ways to weatherize your home or log on at togetherwesave.com.

*Your Touchstone Energy® Cooperative
wishes you a warm, safe
and happy holiday season!*
