

ENERGY STAR

Buyers Guide

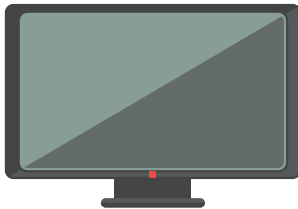

Purchasing **ENERGY STAR**-certified appliances and electronics is a great way to save energy in your home. But how do you choose the right product? It depends on your energy-saving goals *and* how you use energy in your home.

Do you wash multiple loads of laundry each week? Investing in an ENERGY STAR-certified washer could save you around \$45 on your utility bill each year. Some of the top-rated ENERGY STAR-certified large washers come from LG and Samsung. Visit ENERGY STAR's "Most Efficient 2016" page to learn more.

Home computers can use a shocking amount of energy each year. If all computers in the U.S. were ENERGY STAR certified, we would save more than \$1 billion in energy costs per year. If you can't buy an ENERGY STAR-certified computer, consider updating the power management setting on your computer. Visit energystar.gov/products/office_equipment/computers.

The larger TVs get, the more energy they use. But ENERGY STAR-certified TVs are, on average, 25% more efficient than conventional models. LG, Samsung and Vizio make the list of ENERGY STAR's most efficient 2016 TVs.

There are many different types of ENERGY STAR-certified products, including:

- Air purifiers
- Roof products
- Set-top boxes and cable boxes
- Decorative light strands
- Data center storage
- Pool pumps
- Vending machines
- Dehumidifiers
