

You have the power with
Smart Home Technologies

A Touchstone Energy® Cooperative 

1 Smart Hub/Bridge

If you are looking to make your home smart without having to hire a company to install an interconnected system, then an internet-connected smart hub is the first thing you'll need. A smart hub will allow you to control all your smart devices from one app by acting as a middle man that facilitates communications between all your smart home devices.

2 Smart Lighting

Like most items in a smart home, smart lighting can be controlled with a few swipes of a smart phone app. But smart lighting is more than just convenient. Smart light bulbs are more energy efficient than standard incandescent bulbs. Some bulbs use GPS on your phone to determine your location, and can turn on or off depending on where you are located. Some bulbs are even voice controlled!

3 Smart Blinds

Smart blinds can be useful for those who have tall, hard-to-reach windows; for those who have difficulty moving around the house; or for those who simply want

to smarten their home. Smart blinds allow you to schedule your blinds to open and close during certain times of day – a bonus if you are trying to be energy efficient – or control them via an app.

4 Smart Locks

Smart locks allow you and anyone else you wish to enter your home with ease. Some smart locks let you open your doors with your cell phone. Some let you see who is coming and going while you are out of the house. Some even allow you to assign security privileges to certain people.

5 Smart Thermostat

A smart thermostat is a great way to keep your home smart and energy efficient. Many smart thermostats can learn your heating and cooling behavior and will auto-schedule based on your preferences.

6 Smart Cooking Appliances

Smart cooking appliances, like smokers, allow you to cook a perfect meal away from home, without burning the house down! Wi-Fi technology makes these cooking appliances smart!
