Classroom grant projects

MCEC President/CEO Alan Wattles watches as two Valmeyer Grade School (VGS) students demonstrate their Snap Circuit Jr. project. This classroom project was made possible with the \$500 grant awarded to principal Teena Riechmann, who submitted the application.

The kits teach the students how to build working electric circuits as well as design their own. This project gives them hands on experience constructing working models of electric circuits.

With this grant money, VGS students get to work with electrical components and gain an understanding of electrical circuitry.
