

Use LED holiday lights to save energy.

According to the Alliance to Save Energy, LED holiday lights use up to 90 percent less energy and can last up to 40 holiday seasons. The cost to operate LED lights makes traditional bulbs look like energy hogs. At 12 hours a day for 40 days, a string of incandescent lights adds \$10 to your energy bill, while a string of LED lights adds just over \$0.25.
