

High school grads leaving home for the first time have a lot on their minds.

Make sure electrical safety is, too.

A Touchstone Energy® Cooperative 

- Use power strips with overcurrent protectors. This will shut off the power if there is too much power being drawn.
- Only purchase and use electrical products tested for safety. Some common approved safety labels include UL, CSA, and MET.
- Keep all electrical appliances and cords safely away from bedding, curtains, papers and other flammable material.
- Make sure outlets around sinks are equipped with ground fault circuit interrupters (GFCIs) before use. If they are not, contact the resident assistant, campus housing staff or landlord.
- Unplug small appliances when not in use and all electronics when away for extended periods.
- Always use microwave-safe containers. Glass, ceramic containers and plastics labeled “microwave-safe” should always be used. Metal and aluminum foil can damage the microwave or start a fire. If the microwave is damaged in any way, do not use it.
- Never disable a smoke detector, and never ignore a fire alarm or assume it is a drill. Every time a fire alarm sounds, residents should calmly and quickly follow practiced procedures and immediately exit the building.
